(54) SLOT MACHINE

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a slot machine which is improved in visibility for a specific symbol placed on the outer periphery face of a reel to make Meashi (pushing a button to stop the reel at a desired position) easier.

SOLUTION: At least two or more specific symbols and a plurality of non-specific symbols are placed on the outer periphery face of a reel in this slot machine. Non-specific symbols are placed in a prescribed width area while specific symbols are made laterally longer than non-specific symbols and at least one side of both right and left sides is projected from the prescribed width area and one side projecting part is made a colored almost rectangular shape and distributed to either right or left corresponding to the kind of a specific symbol.
